Micro Lab exam sample questions

1. Why do we use delay() in arduino code ? [2]
2. What is the purpose of the setup() and loop() function ? [2]
3. What is the difference between analogRead() and digitalRead() function ? [2]
4. Why do we use GPIO pins in raspberry pi ? [2]
5. Below is an image of an ESP32 and a DHT11 sensor. Connect the DHT11 to the ESP32 by drawing the wiring. [3]

6. Below a code is given to blink an LED for 1 second. [4]

```
void setup() {

      pinMode(1, OUTPUT);

void loop()
{
      digitalWrite(1, HIGH);
      delay(1000);
      digitalWrite(1, LOW);
      delay(1000);
}
```

Modify the code so that the led turns on for 3 seconds and it turns off for 2 seconds. You don't need to write the whole code. Only write the modified lines.
